

LED Truck Restraint Light Kits

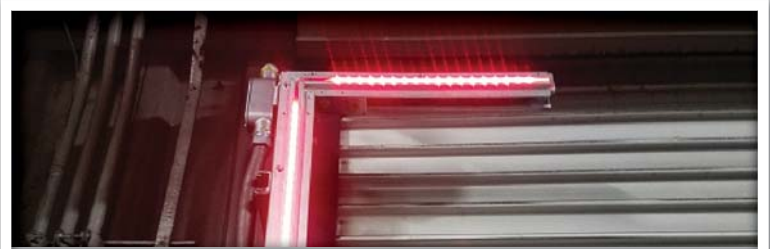

Our LED Light Kits Help Prevent Loading Dock Accidents and Injuries!

Red, green and amber LEDs communicate the safety status of warehouse truck restraint systems

Product Details

Our Truck Restraint Light Kit (TRLK) is a lighting system that activates when a tractor-trailer truck locks onto a warehouse dock. This life-safety product uses multi-colored LEDs to alert workers to the safety status of the truck restraint system.

- Red and green LED lights signal safe action
- LEDs flash amber to indicate lock-fail mode
- Fully programmable LED Controller
- Significant reduction in loading dock accidents
- Works with most restraints
- LEDs are visible from a distance by supervisors and surveillance cameras

LEDs mounted on the outside of the warehouse facing the truck driver turn red upon locking, indicating he cannot leave.

LEDs mounted inside the warehouse turn green when lock engages and it is safe for the forklifts to enter the trailer
